We move from fantastic token design and ICO smart contracts to website deployment (ICO/Token Landing Page), we provide an all-inclusive development support for ICO including Bounty and Airdrop Smart Contracts.

Complete App Development

We build Web Applications, Back-end systems, API for your native. We also design and build new systems from scratch, based on your idea, We connect applications to numbers of external systems through their APIs. We design and deliver scalable applications for handling large traffic in a pinch, for growing businesses.

Cyber-Security Services

At Blockchaincoders, take a different approach towards Cyber Security. We offer high security services against all-round cyber attacks for Low and High Business Platforms including Cryptocurrency Exchange Platforms. We deliver quality services tailored to your needs. We build an accurate profile of your primary business function, where threats come from, and what the goal of your security assessment is. We focus on long term relationships with our clients to ensure your company gets the best penetration test possible, we offer you our high-end, professional security audit services tailored to your needs.

Smart Contract Audit

Running a Smart contract for your project guarantees total decentralization and increased transparency of your platform, and this comes with a need to ensure the security of smart contracts too. To ensure that your smart contract is secure and ready for deployment, Blockchain-Coders is here to provide you with our "Smart Contract Audit Services" to check for vulnerabilities in your contract which can be exploited by malicious actors, leading to stolen and often unrecoverable funds, or unintentional code executions that could result in the locking up of millions of dollars.
